com.sun.javacard.ant.tasks

Class APDUToolTask

java.lang.Object

 └ org.apache.tools.ant.ProjectComponent

 └ org.apache.tools.ant.Task

 └ org.apache.tools.ant.taskdefs.Java

 └ [com.sun.javacard.ant.tasks.JavacardTaskBase](#)

 └ **com.sun.javacard.ant.tasks.APDUToolTask**

Direct Known Subclasses:

[DeployCapTask](#)

public class **APDUToolTask**

extends [JavacardTaskBase](#)

This class encapsulates call to APDUTool.

Field Summary

protected boolean	checkForDownloadFailure Indicates if download in cref is to be verified
protected java. lang. String	crefExecutable cRef executable name and path
protected java. lang. String	inEEPFile input EEPROM file name (optional)

protected java. lang. String	outEEFile output EEPROM file name
---------------------------------------	---

protected java. lang. String	scriptFileName Fully qualified script file name
---------------------------------------	---

Fields inherited from class com.sun.javacard.ant.tasks.JavacardTaskBase

[bundleName](#), [messages](#), [noBanner](#), [version](#)

Fields inherited from class org.apache.tools.ant.taskdefs.Java

redirector, redirectorElement

Fields inherited from class org.apache.tools.ant.Task

description, location, target, taskName, taskType, wrapper

Fields inherited from class org.apache.tools.ant.ProjectComponent

project

Constructor Summary

[APDUToolTask\(\)](#)

Method Summary

protected void	checkForFailures() If all responses from the card or cref are expected to be 9000, this method is used to verify that.
-------------------	--

void	execute() Executes the task
------	---

protected void	initCard() This method starts cref.
-------------------	---

protected void	sendAPDUSToCard (boolean checkForErrors) Runs the APDUTool to download the APDU script in cref.
void	setCheckDownloadFailure (boolean on) Sets/resets the checkForDownloadFailure flag
void	setCrefExe (java.lang.String crefExe) Sets the name and path for cref executable
void	setInEEFile (java.lang.String inFileName) Sets the EEPROM input file name
void	setOutEEFile (java.lang.String outFileName) Sets the EEPROM output file name
void	setScriptFile (java.lang.String scriptFileName) Sets the APDU script file name

Methods inherited from class com.sun.javacard.ant.tasks.[JavacardTaskBase](#)

[setNoBanner](#), [setupCommonOptions](#), [setVersion](#)

Methods inherited from class org.apache.tools.ant.taskdefs.Java

addAssertions, addConfiguredRedirector, addEnv, addSysproperty, addSyspropertyset, clearArgs, createArg, createBootclasspath, createClasspath, createJvmarg, createPermissions, createWatchdog, executeJava, handleErrorFlush, handleErrorOutput, handleFlush, handleInput, handleOutput, maybeSetResultPropertyValue, run, setAppend, setArgs, setClassname, setClasspath, setClasspathRef, setDir, setError, setErrorProperty, setFailonerror, setFork, setInput, setInputString, setJar, setJvm, setJvmargs, setJVMVersion, setLogError, setMaxmemory, setNewenvironment, setOutput, setOutputproperty, setResultProperty, setSpawn, setTimeout, setupRedirector

Methods inherited from class org.apache.tools.ant.Task

getDescription, getLocation, getOwningTarget, getRuntimeConfigurableWrapper, getTaskName, getTaskType, getWrapper, init, isInvalid, log, log, maybeConfigure, perform, reconfigure, setDescription, setLocation, setOwningTarget, setRuntimeConfigurableWrapper, setTaskName, setTaskType

Methods inherited from class org.apache.tools.ant.ProjectComponent

getProject, setProject

Methods inherited from class java.lang.Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, toString, wait, wait

Field Detail

scriptFileName

protected java.lang.String **scriptFileName**

Fully qualified script file name

outEEFile

protected java.lang.String **outEEFile**

output EEPROM file name

inEEFile

protected java.lang.String **inEEfile**

input EEPROM file name (optional)

crefExecutable

protected java.lang.String **crefExecutable**

cRef executable name and path

checkForDownloadFailure

```
protected boolean checkForDownloadFailure
```

Indicates if download in cref is to be verified

Constructor Detail

APDUToolTask

```
public APDUToolTask()
```

Method Detail

setCheckDownloadFailure

```
public void setCheckDownloadFailure(boolean on)
```

Sets/resets the checkForDownloadFailure flag

Parameters:

on - switches the checkForDownloadFailure on or off

setOutEEFile

```
public void setOutEEFile(java.lang.String outFileName)
```

Sets the EEPROM output file name

Parameters:

outFileName - is the EEPROM file name

setInEEFile

```
public void setInEEFile(java.lang.String inFileName)
```

Sets the EEPROM input file name

Parameters:

inFileName - is the EEPROM file name

setScriptFile

```
public void setScriptFile(java.lang.String scriptFileName)
```

Sets the APDU script file name

Parameters:

scriptFileName - is the script file name

setCrefExe

```
public void setCrefExe(java.lang.String crefExe)
```

Sets the name and path for cref executable

Parameters:

crefExe - is fully qualified name and path for cref exe

initCard

```
protected void initCard()  
throws org.apache.tools.ant.BuildException
```

This method starts cref. In case we want to start a card in order to download the APDU script in the card, a subclass can be written which can override this method to initialize a card instead of cref.

Throws:

```
org.apache.tools.ant.BuildException
```

sendAPDUSToCard

```
protected void sendAPDUSToCard(boolean checkForErrors)
                               throws org.apache.tools.ant.BuildException
```

Runs the APDUTool to download the APDU script in cref. A subclass of this class may override this method to use some other tool to send APDUs to cref or a smart card.

Parameters:

checkForErrors - could be set to true if all responses that come back from the card are expected to be 9000 and we need to verify this

Throws:

```
org.apache.tools.ant.BuildException
```

checkForFailures

```
protected void checkForFailures()
                               throws org.apache.tools.ant.BuildException
```

If all responses from the card or cref are expected to be 9000, this method is used to verify that. And if any response is other than 9000, this method throws BuildException that download failed.

Throws:

```
org.apache.tools.ant.BuildException
```

execute

```
public void execute()
        throws org.apache.tools.ant.BuildException
```

Executes the task

Throws:

org.apache.tools.ant.BuildException

A

[**APDUToolTask**](#) - class com.sun.javacard.ant.tasks.[APDUToolTask](#).

This class encapsulates call to APDUTool.

[**APDUToolTask\(\)**](#) - Constructor for class com.sun.javacard.ant.tasks.[APDUToolTask](#)

[**AppletNameAID**](#) - class com.sun.javacard.ant.types.[AppletNameAID](#).

Defines the appletnameaid the link between Applet name and instance aid defined like
aid="A0:01:02:03:04:05:06"/>

[**AppletNameAID\(\)**](#) - Constructor for class com.sun.javacard.ant.types.[AppletNameAID](#)

[**addConfiguredAppletnameaid\(AppletNameAID\)**](#) - Method in class com.sun.javacard.ant.tasks.

[ConverterTask](#)

Adds the applet names instance aids can be several

[**addExportFiles\(FileSet\)**](#) - Method in class com.sun.javacard.ant.tasks.[VerifierTask](#)

adds export file set to the export file set list

[**addJCAInputFile\(JCAInputFile\)**](#) - Method in class com.sun.javacard.ant.tasks.[MaskgenTask](#)

adds an input JCA file

[**aid**](#) - Variable in class com.sun.javacard.ant.types.[AppletNameAID](#)

Applet AID

[**appletname**](#) - Variable in class com.sun.javacard.ant.types.[AppletNameAID](#)

Applet name

[**applets**](#) - Variable in class com.sun.javacard.ant.tasks.[ConverterTask](#)

List of applets in the package being converted

B

[**bundleName**](#) - Static variable in class com.sun.javacard.ant.tasks.[CapDumpTask](#)

[**bundleName**](#) - Static variable in class com.sun.javacard.ant.tasks.[JavacardTaskBase](#)

C

CapDumpTask - class com.sun.javacard.ant.tasks.[CapDumpTask](#).

Dumps contents of a CAP file Wraps the call to "com.sun.javacard.capdump.CapDump" in its own Ant task derived from the standard Java Task that comes with the Ant distribution.

CapDumpTask() - Constructor for class com.sun.javacard.ant.tasks.[CapDumpTask](#)

CapgenTask - class com.sun.javacard.ant.tasks.[CapgenTask](#).

Encapsulates call to Capgen to generate a CAP file

CapgenTask() - Constructor for class com.sun.javacard.ant.tasks.[CapgenTask](#)

ConverterTask - class com.sun.javacard.ant.tasks.[ConverterTask](#).

Defines an ANT task to run the Java Card(TM) converter.

ConverterTask() - Constructor for class com.sun.javacard.ant.tasks.[ConverterTask](#)

capName - Variable in class com.sun.javacard.ant.tasks.[CapDumpTask](#)

CAP file name

capName - Variable in class com.sun.javacard.ant.tasks.[DeployCapTask](#)

CAP file to be deployed

capName - Variable in class com.sun.javacard.ant.tasks.[ScriptgenTask](#)

Name of CAP file

capName - Variable in class com.sun.javacard.ant.tasks.[VerifyCapTask](#)

Name and path of the CAP file

checkForDownloadFailure - Variable in class com.sun.javacard.ant.tasks.[APDUToolTask](#)

Indicates if download in cref is to be verified

checkForFailures() - Method in class com.sun.javacard.ant.tasks.[APDUToolTask](#)

If all responses from the card or cref are expected to be 9000, this method is used to verify that.

classDir - Variable in class com.sun.javacard.ant.tasks.[ConverterTask](#)

base class directory

classDir - Variable in class com.sun.javacard.ant.tasks.[Exp2TextTask](#)

Class directory

className - Static variable in class com.sun.javacard.ant.tasks.[CapDumpTask](#)

Name of main CapDump class

className - Static variable in class com.sun.javacard.ant.tasks.[MaskgenTask](#)

Maskgen class name

com.sun.javacard.ant.tasks - package com.sun.javacard.ant.tasks

com.sun.javacard.ant.types - package com.sun.javacard.ant.types

configFileName - Variable in class com.sun.javacard.ant.tasks.[MaskgenTask](#)

configuration file name

configfile - Variable in class com.sun.javacard.ant.tasks.[ConverterTask](#)

configuration file

createExportpath() - Method in class com.sun.javacard.ant.tasks.[ConverterTask](#)

used to handle a nested path element for the export file path

crefExecutable - Variable in class com.sun.javacard.ant.tasks.[APDUToolTask](#)

cRef executable name and path

D

DeployCapTask - class com.sun.javacard.ant.tasks.[DeployCapTask](#).

This class encapsulates call to scriptgen, cref and APDUTool to download a CAP file in cref and generate a resulting EEPROM image

DeployCapTask() - Constructor for class com.sun.javacard.ant.tasks.[DeployCapTask](#)

debug - Variable in class com.sun.javacard.ant.tasks.[ConverterTask](#)

Flag to indicate if debug flag should be on or off

debugInfo - Variable in class com.sun.javacard.ant.tasks.[MaskgenTask](#)

indicates if debugInfo flag is to be set or not

E

Exp2TextTask - class com.sun.javacard.ant.tasks.[Exp2TextTask](#).

Convertes the export file of a package to a text file Wraps the call to "com.sun.javacard.converter.Exp2Text" in its own Ant task derived from the standard Java Task that comes with the Ant distribution.

Exp2TextTask() - Constructor for class com.sun.javacard.ant.tasks.[Exp2TextTask](#)

eol - Static variable in class com.sun.javacard.ant.tasks.[DeployCapTask](#)

End of line for current platform

execute() - Method in class com.sun.javacard.ant.tasks.[APDUToolTask](#)

Executes the task

execute() - Method in class com.sun.javacard.ant.tasks.[CapDumpTask](#)

Executes the task

execute() - Method in class com.sun.javacard.ant.tasks.[CapgenTask](#)

Executes the task

execute() - Method in class com.sun.javacard.ant.tasks.[ConverterTask](#)

Builds the commandline of the converter and starts the converter.

execute() - Method in class com.sun.javacard.ant.tasks.[DeployCapTask](#)

Executes the task

execute() - Method in class com.sun.javacard.ant.tasks.[Exp2TextTask](#)

Executes the task

execute() - Method in class com.sun.javacard.ant.tasks.[MaskgenTask](#)

Executes the task

execute() - Method in class com.sun.javacard.ant.tasks.[ScriptgenTask](#)

Executes the task

execute() - Method in class com.sun.javacard.ant.tasks.[VerifyCapTask](#)

Builds the commandline of the verifier and starts the verifier.

execute() - Method in class com.sun.javacard.ant.tasks.[VerifyExpTask](#)

Builds the commandline of the verifier and starts the verifier.

execute() - Method in class com.sun.javacard.ant.tasks.[VerifyRevTask](#)

Builds the commandline of the verifier and starts the verifier.

exportFileSets - Variable in class com.sun.javacard.ant.tasks.[VerifierTask](#)

list of file sets containing export files

exportFiles - Variable in class com.sun.javacard.ant.tasks.[VerifierTask](#)

list of export files

exportPath - Variable in class com.sun.javacard.ant.tasks.[ConverterTask](#)

path to export files

exportmap - Variable in class com.sun.javacard.ant.tasks.[ConverterTask](#)

Indicates if exportmap option should be used

extractFileNames(FileSet) - Method in class com.sun.javacard.ant.tasks.[VerifierTask](#)

Extracts file names from a file set and puts them along with their fully qualified paths in exportFiles arrayList.

F

footer - Static variable in class com.sun.javacard.ant.tasks.[DeployCapTask](#)

G

[generateScriptFile\(\)](#) - Method in class com.sun.javacard.ant.tasks.[DeployCapTask](#)

Prepares the APDU script file for download into the card.

[generator](#) - Variable in class com.sun.javacard.ant.tasks.[MaskgenTask](#)

Generator (could be cref, jref etc)

[getAid\(\)](#) - Method in class com.sun.javacard.ant.types.[AppletNameAID](#)

Returns the aid of the applet instance

[getAppletname\(\)](#) - Method in class com.sun.javacard.ant.types.[AppletNameAID](#)

Returns the applet name

[getInputFileName\(\)](#) - Method in class com.sun.javacard.ant.types.[JCAInputFile](#)

Returns the applet name

H

[header](#) - Static variable in class com.sun.javacard.ant.tasks.[DeployCapTask](#)

I

[inEEFile](#) - Variable in class com.sun.javacard.ant.tasks.[APDUToolTask](#)

input EEPROM file name (optional)

[initCard\(\)](#) - Method in class com.sun.javacard.ant.tasks.[APDUToolTask](#)

This method starts cref.

[inputJCAs](#) - Variable in class com.sun.javacard.ant.tasks.[MaskgenTask](#)

List of input JCA files

[intSupport](#) - Variable in class com.sun.javacard.ant.tasks.[ConverterTask](#)

Indicates if int support is required for the package being converted

[isNull\(\)](#) - Method in class com.sun.javacard.ant.types.[AppletNameAID](#)

Checks that appletname and aid is not null

J

[JCAFileName](#) - Variable in class com.sun.javacard.ant.tasks.[CapgenTask](#)

Input JCA file name

JCAInputFile - class com.sun.javacard.ant.types.JCAInputFile.

Encapsulates a JCA input file name.

JCAInputFile() - Constructor for class com.sun.javacard.ant.types.JCAInputFile

JavacardTaskBase - class com.sun.javacard.ant.tasks.JavacardTaskBase.

This class serves as the base class for all Java Card ant tasks

JavacardTaskBase() - Constructor for class com.sun.javacard.ant.tasks.JavacardTaskBase

M

MaskgenTask - class com.sun.javacard.ant.tasks.MaskgenTask.

Encapsulates call to Maskgen to generate a mask file from input JCA files

MaskgenTask() - Constructor for class com.sun.javacard.ant.tasks.MaskgenTask

majorminorVersion - Variable in class com.sun.javacard.ant.tasks.ConverterTask

package version number (combination of minor and major version numbers)

mask - Variable in class com.sun.javacard.ant.tasks.ConverterTask

Indicates if this package is to be included in mask (rules on native methods are eased for this package)

mem32BitFlag - Variable in class com.sun.javacard.ant.tasks.MaskgenTask

flag to indicate if 32-bit reference size is to be used or not

messages - Static variable in class com.sun.javacard.ant.tasks.CapDumpTask

properties bundle file that has the internationalized messages

messages - Static variable in class com.sun.javacard.ant.tasks.JavacardTaskBase

properties bundle file that has the internationalized messages

N

noBanner - Variable in class com.sun.javacard.ant.tasks.JavacardTaskBase

Sets the noBanner option for java card tools

noBeginEnd - Variable in class com.sun.javacard.ant.tasks.ScriptgenTask

If this parameter is true, CAP Begin and CAP end are not included in the script file

noWarn - Variable in class com.sun.javacard.ant.tasks.VerifierTask

Turns on (or off) the noWarn flag for verifier tools

nowify - Variable in class com.sun.javacard.ant.tasks.[ConverterTask](#)

Indicates if verification is going to be performed after conversion or not

nowarn - Variable in class com.sun.javacard.ant.tasks.[ConverterTask](#)

indicates if converter should output warning messages or not

O

outCAP - Variable in class com.sun.javacard.ant.tasks.[ConverterTask](#)

Turns the output of CAP file on or off

outEEFile - Variable in class com.sun.javacard.ant.tasks.[APDUToolTask](#)

output EEPROM file name

outEXP - Variable in class com.sun.javacard.ant.tasks.[ConverterTask](#)

Turns the output of EXP file on or off

outFileName - Variable in class com.sun.javacard.ant.tasks.[CapgenTask](#)

Output file name

outFileName - Variable in class com.sun.javacard.ant.tasks.[MaskgenTask](#)

Output file name

outFileName - Variable in class com.sun.javacard.ant.tasks.[ScriptgenTask](#)

output file name

outJCA - Variable in class com.sun.javacard.ant.tasks.[ConverterTask](#)

Turns the output of JCA file on or off

outputDir - Variable in class com.sun.javacard.ant.tasks.[ConverterTask](#)

output directory

outputDir - Variable in class com.sun.javacard.ant.tasks.[Exp2TextTask](#)

output directory

P

packageAID - Variable in class com.sun.javacard.ant.tasks.[ConverterTask](#)

package AID

packageName - Variable in class com.sun.javacard.ant.tasks.[ConverterTask](#)

package name

packageName - Variable in class com.sun.javacard.ant.tasks.[Exp2TextTask](#)

Package name

pkgName - Variable in class com.sun.javacard.ant.tasks.[ScriptgenTask](#)

Name of the package

pkgName - Variable in class com.sun.javacard.ant.tasks.[VerifyCapTask](#)

Package Name

S

ScriptgenTask - class com.sun.javacard.ant.tasks.[ScriptgenTask](#).

This class is responsible for invoking Scriptgen to generate APDU script files from CAP files.

ScriptgenTask() - Constructor for class com.sun.javacard.ant.tasks.[ScriptgenTask](#)

scriptFileName - Variable in class com.sun.javacard.ant.tasks.[APDUToolTask](#)

Fully qualified script file name

sendAPDUSToCard(boolean) - Method in class com.sun.javacard.ant.tasks.[APDUToolTask](#)

Runs the APDUTool to download the APDU script in cref.

setAid(String) - Method in class com.sun.javacard.ant.types.[AppletNameAID](#)

Sets the applet instance aid

setAppletname(String) - Method in class com.sun.javacard.ant.types.[AppletNameAID](#)

Set the Applet name

setCap(boolean) - Method in class com.sun.javacard.ant.tasks.[ConverterTask](#)

switches CAP file generation in the output

setCapFile(String) - Method in class com.sun.javacard.ant.tasks.[CapDumpTask](#)

sets the cap file name

setCapFile(String) - Method in class com.sun.javacard.ant.tasks.[DeployCapTask](#)

Sets cap file name

setCapFile(String) - Method in class com.sun.javacard.ant.tasks.[ScriptgenTask](#)

Sets cap file name

setCapFile(String) - Method in class com.sun.javacard.ant.tasks.[VerifyCapTask](#)

Sets cap file name

setCheckDownloadFailure(boolean) - Method in class com.sun.javacard.ant.tasks.[APDUToolTask](#)

Sets/resets the checkForDownloadFailure flag

setClassDir(Path) - Method in class com.sun.javacard.ant.tasks.[Exp2TextTask](#)

Sets the path to the classdirectory of the package

setClassdir(Path) - Method in class com.sun.javacard.ant.tasks.[ConverterTask](#)

set the path to the class directory of the package

setConfigFile(String) - Method in class com.sun.javacard.ant.tasks.[MaskgenTask](#)

sets the configuration file name

setConfigfile(File) - Method in class com.sun.javacard.ant.tasks.[ConverterTask](#)

Set the location of the config file, overrides all other settings

setCrefExe(String) - Method in class com.sun.javacard.ant.tasks.[APDUToolTask](#)

Sets the name and path for cref executable

setDebug(boolean) - Method in class com.sun.javacard.ant.tasks.[ConverterTask](#)

set the debug flag

setDebugInfo(boolean) - Method in class com.sun.javacard.ant.tasks.[MaskgenTask](#)

setExp(boolean) - Method in class com.sun.javacard.ant.tasks.[ConverterTask](#)

switches EXP file generation in the output

setExportmap(boolean) - Method in class com.sun.javacard.ant.tasks.[ConverterTask](#)

set the exportmap flag

setExportpath(Path) - Method in class com.sun.javacard.ant.tasks.[ConverterTask](#)

set path to the export files that should be used to generate the export file of the package

setExportpathRef(Reference) - Method in class com.sun.javacard.ant.tasks.[ConverterTask](#)

set a reference to a path element for the export file path

setGenerator(String) - Method in class com.sun.javacard.ant.tasks.[MaskgenTask](#)

sets the generator (cref, jref etc)

setInEEFile(String) - Method in class com.sun.javacard.ant.tasks.[APDUToolTask](#)

Sets the EEPROM input file name

setInputFile(String) - Method in class com.sun.javacard.ant.types.[JCAInputFile](#)

Set input file name

setInt(boolean) - Method in class com.sun.javacard.ant.tasks.[ConverterTask](#)

switches int support

setJCAFile(String) - Method in class com.sun.javacard.ant.tasks.[CapgenTask](#)

sets the input JCA file name

setJca(boolean) - Method in class com.sun.javacard.ant.tasks.[ConverterTask](#)

switches JCA file generation in the output

setMajorminorversion(String) - Method in class com.sun.javacard.ant.tasks.[ConverterTask](#)

set the major and minor version as one String

setMask(boolean) - Method in class com.sun.javacard.ant.tasks.[ConverterTask](#)

switches maks generation

setMemRefSize(int) - Method in class com.sun.javacard.ant.tasks.[MaskgenTask](#)

sets the memory reference size

setNoBanner(boolean) - Method in class com.sun.javacard.ant.tasks.[JavacardTaskBase](#)

switches the nobanner flag on or off

setNoBeginEnd(boolean) - Method in class com.sun.javacard.ant.tasks.[ScriptgenTask](#)

Sets noBeginEnd value to the requested value

setNoWarn(boolean) - Method in class com.sun.javacard.ant.tasks.[VerifierTask](#)

switches the noWarn flag

setNoverify(boolean) - Method in class com.sun.javacard.ant.tasks.[ConverterTask](#)

switches the noverifier flag.

setNowarn(boolean) - Method in class com.sun.javacard.ant.tasks.[ConverterTask](#)

switches the nowarn flag

setOutEEFile(String) - Method in class com.sun.javacard.ant.tasks.[APDUToolTask](#)

Sets the EEPROM output file name

setOutFile(String) - Method in class com.sun.javacard.ant.tasks.[CapgenTask](#)

sets the output file name

setOutFile(String) - Method in class com.sun.javacard.ant.tasks.[MaskgenTask](#)

sets the output file name

setOutFile(String) - Method in class com.sun.javacard.ant.tasks.[ScriptgenTask](#)

Sets output file name

setOutputDir(Path) - Method in class com.sun.javacard.ant.tasks.[Exp2TextTask](#)

Set the path to the output directory for the text file

setOutputdirectory(Path) - Method in class com.sun.javacard.ant.tasks.[ConverterTask](#)

set the path to the output directory for the cap, exp and jca files

setPackageName(String) - Method in class com.sun.javacard.ant.tasks.[ConverterTask](#)

sets the package name

setPackageName(String) - Method in class com.sun.javacard.ant.tasks.[Exp2TextTask](#)

sets the package name

setPackageaid(String) - Method in class com.sun.javacard.ant.tasks.[ConverterTask](#)

set the package AID of the package to be converted

setPkgName(String) - Method in class com.sun.javacard.ant.tasks.[ScriptgenTask](#)

Sets the package name for verifier

setPkgName(String) - Method in class com.sun.javacard.ant.tasks.[VerifyCapTask](#)

Sets the package name for verifier

setScriptFile(String) - Method in class com.sun.javacard.ant.tasks.[APDUToolTask](#)

Sets the APDU script file name

setVerbose(boolean) - Method in class com.sun.javacard.ant.tasks.[ConverterTask](#)

switches the verbose flag

setVerbose(boolean) - Method in class com.sun.javacard.ant.tasks.[VerifierTask](#)

switches the verbose flag

setVersion(boolean) - Method in class com.sun.javacard.ant.tasks.[JavacardTaskBase](#)

switches the version flag on or off

setupCommandLineOptions() - Method in class com.sun.javacard.ant.tasks.[VerifierTask](#)

This method sets the common command line options for the verifier tools

setupCommonOptions() - Method in class com.sun.javacard.ant.tasks.[JavacardTaskBase](#)

Sets the nobanner option (if it is true) on the command line

[toString\(\)](#) - Method in class com.sun.javacard.ant.types.[AppletNameAID](#)

returns the two elements as a string

V

[VerifierTask](#) - class com.sun.javacard.ant.tasks.[VerifierTask](#).

This is the base class for all verifier tasks

[VerifierTask\(\)](#) - Constructor for class com.sun.javacard.ant.tasks.[VerifierTask](#)

[VerifyCapTask](#) - class com.sun.javacard.ant.tasks.[VerifyCapTask](#).

This class is responsible for invoking Verifier to verify a CAP file.

[VerifyCapTask\(\)](#) - Constructor for class com.sun.javacard.ant.tasks.[VerifyCapTask](#)

[VerifyExpTask](#) - class com.sun.javacard.ant.tasks.[VerifyExpTask](#).

This class implements the task for VerifyExp.

[VerifyExpTask\(\)](#) - Constructor for class com.sun.javacard.ant.tasks.[VerifyExpTask](#)

[VerifyRevTask](#) - class com.sun.javacard.ant.tasks.[VerifyRevTask](#).

This class implements the task for VerifyRev.

[VerifyRevTask\(\)](#) - Constructor for class com.sun.javacard.ant.tasks.[VerifyRevTask](#)

[verbose](#) - Variable in class com.sun.javacard.ant.tasks.[ConverterTask](#)

Indicates if verbose flag is on or off

[verbose](#) - Variable in class com.sun.javacard.ant.tasks.[VerifierTask](#)

Turns on (or off) the verbose flag for verifier tools

[version](#) - Variable in class com.sun.javacard.ant.tasks.[JavacardTaskBase](#)

Sets the version option for java card tools

How This API Document Is Organized

This API (Application Programming Interface) document has pages corresponding to the items in the navigation bar, described as follows.

Overview

The [Overview](#) page is the front page of this API document and provides a list of all packages with a summary for each. This page can also contain an overall description of the set of packages.

Package

Each package has a page that contains a list of its classes and interfaces, with a summary for each. This page can contain four categories:

- Interfaces (*italic*)
- Classes
- Exceptions
- Errors

Class/Interface

Each class, interface, nested class and nested interface has its own separate page. Each of these pages has three sections consisting of a class/interface description, summary tables, and detailed member descriptions:

- Class inheritance diagram
- Direct Subclasses
- All Known Subinterfaces
- All Known Implementing Classes
- Class/interface declaration
- Class/interface description
- Nested Class Summary
- Field Summary

- Constructor Summary

- Method Summary

- Field Detail

- Constructor Detail

- Method Detail

Each summary entry contains the first sentence from the detailed description for that item. The summary entries are alphabetical, while the detailed descriptions are in the order they appear in the source code. This preserves the logical groupings established by the programmer.

Tree (Class Hierarchy)

There is a [Class Hierarchy](#) page for all packages, plus a hierarchy for each package.

Each hierarchy page contains a list of classes and a list of interfaces. The classes are organized by inheritance structure starting with `java.lang.Object`. The interfaces do not inherit from `java.lang.Object`.

- When viewing the Overview page, clicking on "Tree" displays the hierarchy for all packages.
- When viewing a particular package, class or interface page, clicking "Tree" displays the hierarchy for only that package.

Deprecated API

The [Deprecated API](#) page lists all of the API that have been deprecated. A deprecated API is not recommended for use, generally due to improvements, and a replacement API is usually given. Deprecated APIs may be removed in future implementations.

Index

The [Index](#) contains an alphabetic list of all classes, interfaces, constructors, methods, and fields.

Prev/Next

These links take you to the next or previous class, interface, package, or related page.

Frames/No Frames

These links show and hide the HTML frames. All pages are available with or without frames.

Serialized Form

Each serializable or externalizable class has a description of its serialization fields and methods. This information is of interest to re-implementors, not to developers using the API. While there is no link in the navigation bar, you can get to this information by going to any serialized class and clicking "Serialized Form" in the "See also" section of the class description.

This help file applies to API documentation generated using the standard doclet.

Package com.sun.javacard.ant.tasks

Class Summary

APDUToolTask	This class encapsulates call to APDUTool.
CapDumpTask	Dumps contents of a CAP file Wraps the call to "com.sun.javacard.capdump.CapDump" in its own Ant task derived from the standard Java Task that comes with the Ant distribution.
CapgenTask	Encapsulates call to Capgen to generate a CAP file
ConverterTask	Defines an ANT task to run the Java Card(TM) converter.
DeployCapTask	This class encapsulates call to scriptgen, cref and APDUTool to download a CAP file in cref and generate a resulting EEPROM image
Exp2TextTask	Convertes the export file of a package to a text file Wraps the call to "com.sun.javacard.converter.Exp2Text" in its own Ant task derived from the standard Java Task that comes with the Ant distribution.
JavacardTaskBase	This class serves as the base class for all Java Card ant tasks
MaskgenTask	Encapsulates call to Maskgen to generate a mask file from input JCA files
ScriptgenTask	This class is responsible for invoking Scriptgen to generate APDU script files from CAP files.
VerifierTask	This is the base class for all verifier tasks
VerifyCapTask	This class is responsible for invoking Verifier to verify a CAP file.
VerifyExpTask	This class implements the task for VerifyExp.
VerifyRevTask	This class implements the task for VerifyRev.

com.sun.javacard.ant.types

Class AppletNameAID

java.lang.Object

└ com.sun.javacard.ant.types.AppletNameAID

public class AppletNameAID

extends java.lang.Object

Defines the appletnameaid the link between Applet name and instance aid defined like
aid="A0:01:02:03:04:05:06"/>

Field Summary

protected java. lang. String	aid Applet AID
---------------------------------------	-----------------------------------

protected java. lang. String	appletname Applet name
---------------------------------------	---

Constructor Summary

[AppletNameAID\(\)](#)

Method Summary

java.lang.String	getAid() Returns the aid of the applet instance
java.lang.String	getAppletname() Returns the applet name
boolean	isNull() Checks that appletname and aid is not null
void	setAid(java.lang.String aid) Sets the applet instance aid
void	setAppletname(java.lang.String name) Set the Applet name
java.lang.String	toString() returns the two elements as a string

Methods inherited from class java.lang.Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, wait, wait, wait

appletname

protected java.lang.String **appletname**

Applet name

aid

protected java.lang.String **aid**

Applet AID

Constructor Detail

AppletNameAID

```
public AppletNameAID()
```

Method Detail

setAppletname

```
public void setAppletname(java.lang.String name)
```

Set the Applet name

Parameters:

name - of the Applet class

setAid

```
public void setAid(java.lang.String aid)
```

Sets the applet instance aid

Parameters:

aid - aid of the applet instance as a String

getAppletname

```
public java.lang.String getAppletname()
```

Returns the applet name

Returns:

appletname

getAid

```
public java.lang.String getAid()
```

Returns the aid of the applet instance

Returns:

aid of the applet instance

isNull

```
public boolean isNull()
```

Checks that appletname and aid is not null

Returns:

true if one of the elements is null

toString

```
public java.lang.String toString()
```

returns the two elements as a string

Returns:

appletname:aid as String

com.sun.javacard.ant.types

Class JCAInputFile

java.lang.Object

└ com.sun.javacard.ant.types.JCAInputFile

public class **JCAInputFile**

extends java.lang.Object

Encapsulates a JCA input file name. Other option was to use FileSet class or fileList class, but the problem is that both of these do not support a file name starting with the symbol @ which is supported by Maskgen.

Constructor Summary

[JCAInputFile\(\)](#)

Method Summary

java.lang.String	getInputFileName() Returns the applet name
void	setInputFile (java.lang.String name) Set input file name

Methods inherited from class java.lang.Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll,
toString, wait, wait, wait

Constructor Detail

JCAInputFile

```
public JCAInputFile()
```

Method Detail

setInputFile

```
public void setInputFile( java.lang.String name )
```

Set input file name

Parameters:

name - of the Applet class

getInputFileName

```
public java.lang.String getInputFileName()
```

Returns the applet name

Returns:

appletname

com.sun.javacard.ant.tasks

Class ConverterTask

java.lang.Object

└ org.apache.tools.ant.ProjectComponent

└ org.apache.tools.ant.Task

└ org.apache.tools.ant.taskdefs.Java

 └ [com.sun.javacard.ant.tasks.JavacardTaskBase](#) └ [com.sun.javacard.ant.tasks.ConverterTask](#)

```
public class ConverterTask
```

```
extends JavacardTaskBase
```

Defines an ANT task to run the Java Card(TM) converter. See the <http://java.sun.com/prodcuts/javacard> for more informations. Wraps the call com.sun.javacard.converter.Converter in its own Ant task derived from the standard Java Task that comes with the Ant distribution.

Field Summary

protected java. util. ArrayList	applets List of applets in the package being converted
protected org. apache. tools.ant. types.Path	classDir base class directory

protected java.io. File	<u>configfile</u> configuration file
protected boolean	<u>debug</u> Flag to indicate if debug flag should be on or off
protected boolean	<u>exportmap</u> Indicates if exportmap option should be used
protected org. apache. tools.ant. types.Path	<u>exportPath</u> path to export files
protected boolean	<u>intSupport</u> Indicates if int support is required for the package being converted
protected java. lang. String	<u>majorminorVersion</u> package version number (combination of minor and major version numbers)
protected boolean	<u>mask</u> Indicates if this package is to be included in mask (rules on native methods are eased for this package)
protected boolean	<u>noverify</u> Indicates if verification is going to be performed after conversion or not
protected boolean	<u>nowarn</u> indicates if converter should output warning messages or not
protected boolean	<u>outCAP</u> Turns the output of CAP file on or off
protected boolean	<u>outEXP</u> Turns the output of EXP file on or off
protected boolean	<u>outJCA</u> Turns the output of JCA file on or off
protected org. apache. tools.ant. types.Path	<u>outputDir</u> output directory

protected java. lang. String	packageAID package AID

Constructor Summary

[ConverterTask\(\)](#)

Method Summary

void	addConfiguredAppletnameaid (AppletNameAID appletaid) Adds the applet names instance aids can be several
------	--

org. apache. tools. ant. types. Path	createExportpath() used to handle a nested path element for the export file path
void	execute() Builds the commandline of the converter and starts the converter.
void	setCap(boolean on) switches CAP file generation in the output
void	setClassdir(org.apache.tools.ant.types.Path classdir) set the path to the class directory of the package
void	setConfigfile(java.io.File config) Set the location of the config file, overrides all other settings
void	setDebug(boolean on) set the debug flag
void	setExp(boolean on) switches EXP file generation in the output
void	setExportmap(boolean on) set the exportmap flag
void	setExportpath(org.apache.tools.ant.types.Path exportPath) set path to the export files that should be used to generate the export file of the package
void	setExportpathRef(org.apache.tools.ant.types.Reference r) set a reference to a path element for the export file path
void	setInt(boolean on) switches int support
void	setJca(boolean on) switches JCA file generation in the output
void	setMajorminorversion(java.lang.String majorMinor) set the major and minor version as one String
void	setMask(boolean on) switches maks generation

void	setNoverify (boolean on) switches the noverifier flag.
void	setNowarn (boolean on) switches the nowarn flag
void	setOutputdirectory (org.apache.tools.ant.types.Path dir) set the path to the output directory for the cap, exp and jca files
void	setPackageaid (java.lang.String packageAid) set the package AID of the package to be converted
void	setPackageName (java.lang.String packageName) sets the package name
void	setVerbose (boolean on) switches the verbose flag

Field Detail

packageName

protected java.lang.String **packageName**

package name

packageAID

protected java.lang.String **packageAID**

package AID

majorminorVersion

protected java.lang.String **majorminorVersion**

package version number (combination of minor and major version numbers)

applets

protected java.util.ArrayList **applets**

List of applets in the package being converted

classDir

protected org.apache.tools.ant.types.Path **classDir**

base class directory

outputDir

protected org.apache.tools.ant.types.Path **outputDir**

output directory

debug

protected boolean **debug**

Flag to indicate if debug flag should be on or off

exportmap

protected boolean **exportmap**

Indicates if exportmap option should be used

exportPath

protected org.apache.tools.ant.types.Path **exportPath**

path to export files

intSupport

protected boolean **intSupport**

Indicates if int support is required for the package being converted

mask

protected boolean **mask**

Indicates if this package is to be included in mask (rules on native methods are eased for this package)

noverify

protected boolean **noverify**

Indicates if verification is going to be performed after conversion or not

nowarn

protected boolean **nowarn**

indicates if converter should output warning messages or not

outCAP

```
protected boolean outCAP
```

Turns the output of CAP file on or off

outJCA

```
protected boolean outJCA
```

Turns the output of JCA file on or off

outEXP

```
protected boolean outEXP
```

Turns the output of EXP file on or off

verbose

```
protected boolean verbose
```

Indicates if verbose flag is on or off

configfile

```
protected java.io.File configfile
```

configuration file

Constructor Detail

ConverterTask

```
public ConverterTask()
```

Method Detail

setPackageName

```
public void setPackageName(java.lang.String packageName)
```

sets the package name

Parameters:

packageName - full qualified name of the package to convert

setPackageaid

```
public void setPackageaid(java.lang.String packageAid)
```

set the package AID of the package to be converted

Parameters:

packageAid - AID of the package

setMajorminorversion

```
public void setMajorminorversion(java.lang.String majorMinor)
```

set the major and minor version as one String

Parameters:

majorMinor - version in the form e.g. 1.3

setClassdir

```
public void setClassdir(org.apache.tools.ant.types.Path classdir)
```

set the path to the class directory of the package

Parameters:

classdir - path to the class directory of the package

setOutputdirectory

```
public void setOutputdirectory(org.apache.tools.ant.types.Path dir)
```

set the path to the output directory for the cap, exp and jca files

Parameters:

dir - to the output directory

setDebug

```
public void setDebug(boolean on)
```

set the debug flag

Parameters:

on - switches the debug flag on or off

setExportmap

```
public void setExportmap(boolean on)
```

set the exportmap flag

Parameters:

on - switches the exportmap flag on or off

setExportpath

```
public void setExportpath(org.apache.tools.ant.types.Path exportPath)
```

set path to the export files that should be used to generate the export file of the package

Parameters:

exportPath - path to the export files

createExportpath

```
public org.apache.tools.ant.types.Path createExportpath()
```

used to handle a nested path element for the export file path

addConfiguredAppletnameaid

```
public void addConfiguredAppletnameaid(AppletNameAID appletaid)
```

Adds the applet names instance aids can be several

Parameters:

appletaid - combination of applet name and aid

setExportpathRef

```
public void setExportpathRef(org.apache.tools.ant.types.Reference r)
```

set a refernce to a path element for the export file path

Parameters:

r - a reference to the exportfiles path

setInt

```
public void setInt(boolean on)
```

switches int support

Parameters:

on - switches the integer flag on or off, default is off

setMask

```
public void setMask(boolean on)
```

switches maks generation

Parameters:

on - switches mask generation on or off, default is off

setNoverify

```
public void setNoverify(boolean on)
```

switches the noverfier flag.

Parameters:

on - switches the noverifier flag on or of, default is off meaning verification

setNowarn

```
public void setNowarn(boolean on)
```

switches the nowarn flag

Parameters:

on - switches the nowarn flag on or off, default is off meaning warnings are given

setCap

```
public void setCap(boolean on)
```

switches CAP file generation in the output

Parameters:

on - switches the *.cap file generation on or off, default is off, no cap file generation

setJca

```
public void setJca(boolean on)
```

switches JCA file generation in the output

Parameters:

on - switches the *.jca file generation on or off, default is off, no jca file generation

setExp

```
public void setExp(boolean on)
```

switches EXP file generation in the output

Parameters:

on - switches the *.exp file generation on or off, default is off, no exp file generation

setVerbose

```
public void setVerbose(boolean on)
```

switches the verbose flag

Parameters:

on - switches the verbose on or off, default is off, silent mode.

setConfigfile

```
public void setConfigfile(java.io.File config)
```

Set the location of the config file, overrides all other settings

Parameters:

config - the name and location of the config file

execute

```
public void execute()  
    throws org.apache.tools.ant.BuildException
```

Builds the commandline of the converter and starts the converter.

Throws:

org.apache.tools.ant.BuildException

End of line for current platform

header

```
protected static final java.lang.String header
```

footer

```
protected static final java.lang.String footer
```

capName

```
protected java.lang.String capName
```

CAP file to be deployed

Constructor Detail

DeployCapTask

```
public DeployCapTask()
```

Method Detail

setCapFile

```
public void setCapFile(java.lang.String capName)
```

Sets cap file name

Parameters:

capName - is the cap file name

generateScriptFile

```
protected void generateScriptFile()
```

```
throws org.apache.tools.ant.BuildException
```

Prepares the APDU script file for download into the card.

Throws:

```
org.apache.tools.ant.BuildException
```

execute

```
public void execute()
```

```
throws org.apache.tools.ant.BuildException
```

Executes the task

Overrides:

[execute](#) in class [APDUToolTask](#)

Throws:

```
org.apache.tools.ant.BuildException
```

output directory

Constructor Detail

Exp2TextTask

public **Exp2TextTask()**

Method Detail

setPackageName

public void **setPackageName**(java.lang.String packageName)

sets the package name

Parameters:

packageName - the name of the package

setClassDir

```
public void setClassDir(org.apache.tools.ant.types.Path classdir)
```

Sets the path to the classdirectory of the package

Parameters:

classdir - the path to the classdirectory

setOutputDir

```
public void setOutputDir(org.apache.tools.ant.types.Path dir)
```

Set the path to the output directory for the text file

Parameters:

dir - the path to the output directory

execute

```
public void execute()
```

```
throws org.apache.tools.ant.BuildException
```

Executes the task

Throws:

org.apache.tools.ant.BuildException

Maskgen class name

See Also:

[Constant Field Values](#)

configFileName

protected java.lang.String **configFileName**

configuration file name

mem32BitFlag

protected boolean **mem32BitFlag**

flag to indicate if 32-bit reference size is to be used or not

outFileName

protected java.lang.String **outFileName**

Output file name

generator

```
protected java.lang.String generator
```

Generator (could be cref, jref etc)

debugInfo

```
protected boolean debugInfo
```

indicates if debugInfo flag is to be set or not

inputJCAs

```
protected java.util.ArrayList inputJCAs
```

List of input JCA files

Constructor Detail

MaskgenTask

```
public MaskgenTask()
```

Method Detail

setConfigFile

```
public void setConfigFile(java.lang.String configName)
```

sets the configuration file name

Parameters:

configName - the name of the config file

setOutFile

```
public void setOutFile(java.lang.String outFileName)
```

sets the output file name

Parameters:

outFileName - the name of the output file

setMemRefSize

```
public void setMemRefSize(int memRefSize)
```

sets the memory reference size

Parameters:

memRefSize - is the size of memory reference in target mask file

setDebugInfo

```
public void setDebugInfo(boolean on)
```

setGenerator

```
public void setGenerator(java.lang.String generator)
```

sets the generator (cref, jref etc)

Parameters:

generator - string

addJCAInputFile

```
public void addJCAInputFile(JCAInputFile inputFile)
```

adds an input JCA file

Parameters:

inputFile - contains input JCA file name or input file name that contains list of JCA file names

execute

```
public void execute()
    throws org.apache.tools.ant.BuildException
```

Executes the task

Throws:

org.apache.tools.ant.BuildException

Methods inherited from class java.lang.Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

Field Detail

outFileName

protected java.lang.String **outFileName**

output file name

noBeginEnd

protected boolean **noBeginEnd**

If this parameter is true, CAP Begin and CAP end are not included in the script file

pkgName

protected java.lang.String **pkgName**

Name of the package

capName

protected java.lang.String **capName**

Name of CAP file

Constructor Detail

ScriptgenTask

public **ScriptgenTask()**

Method Detail

setPkgName

public void **setPkgName**(java.lang.String pkgName)

Sets the package name for verifier

Parameters:

pkgName - is package name

setNoBeginEnd

```
public void setNoBeginEnd(boolean on)
```

Sets noBeginEnd value to the requested value

Parameters:

on - is boolean value to be set for noBeginEnd flag

setOutFile

```
public void setOutFile(java.lang.String outFileName)
```

Sets output file name

Parameters:

outFileName - is the ouput file name

setCapFile

```
public void setCapFile(java.lang.String capName)
```

Sets cap file name

Parameters:

capName - is the cap file name

execute

```
public void execute( )
    throws org.apache.tools.ant.BuildException
```

Executes the task

Throws:

```
org.apache.tools.ant.BuildException
```

Methods inherited from class com.sun.javacard.ant.tasks.JavacardTaskBase

[setNoBanner](#), [setupCommonOptions](#), [setVersion](#)

Methods inherited from class org.apache.tools.ant.taskdefs.Java

addAssertions, addConfiguredRedirector, addEnv, addSysproperty, addSyspropertyset, clearArgs, createArg, createBootclasspath, createClasspath, createJvmarg, createPermissions, createWatchdog, execute, executeJava, handleErrorFlush, handleErrorOutput, handleFlush, handleInput, handleOutput, maybeSetResultPropertyValue, run, setAppend, setArgs, setClassname, setClasspath, setClasspathRef, setDir, setError, setErrorProperty, setFailonerror, setFork, setInput, setInputString, setJar, setJvm, setJvmargs, setJVMVersion, setLogError, setMaxmemory, setNewenvironment, setOutput, setOutputproperty, setResultProperty, setSpawn, setTimeout, setupRedirector

Methods inherited from class org.apache.tools.ant.Task

getDescription, getLocation, getOwningTarget, getRuntimeConfigurableWrapper, getTaskName, getTaskType, getWrapper, init, isInvalid, log, log, maybeConfigure, perform, reconfigure, setDescription, setLocation, setOwningTarget, setRuntimeConfigurableWrapper, setTaskName, setTaskType

Methods inherited from class org.apache.tools.ant.ProjectComponent

getProject, setProject

Methods inherited from class java.lang.Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

Field Detail

verbose

protected boolean **verbose**

Turns on (or off) the verbose flag for verifier tools

noWarn

`protected boolean noWarn`

Turns on (or off) the noWarn flag for verifier tools

exportFiles

`protected java.util.ArrayList exportFiles`

list of export files

exportFileSets

`protected java.util.Vector exportFileSets`

list of file sets containing export files

Constructor Detail

VerifierTask

`public VerifierTask()`

Method Detail

extractFileNames

`protected void extractFileNames(org.apache.tools.ant.types.`

```
FileSet fs)
```

Extracts file names from a file set and puts them along with their fully qualified paths in exportFiles arrayList.

Parameters:

fs - is the file set from which the list of files is to be extracted

setVerbose

```
public void setVerbose(boolean on)
```

switches the verbose flag

Parameters:

on - switches the verbose on or off, default is off, silent mode.

setNoWarn

```
public void setNoWarn(boolean on)
```

switches the noWarn flag

Parameters:

on - switches the noWarn on or off, default is off, no warnings are given

addExportFiles

```
public void addExportFiles(org.apache.tools.ant.types.FileSet fs)
```

adds export file set to the export file set list

Parameters:

fs - file set containing export files

setupCommandLineOptions

```
public void setupCommandLineOptions()
```

This method sets the common command line options for the verifier tools

Field Detail

capName

protected java.lang.String **capName**

Name and path of the CAP file

pkgName

```
protected java.lang.String pkgName
```

Package Name

Constructor Detail

VerifyCapTask

```
public VerifyCapTask( )
```

Method Detail

setPkgName

```
public void setPkgName(java.lang.String pkgName)
```

Sets the package name for verifier

Parameters:

pkgName - is package name

setCapFile

```
public void setCapFile(java.lang.String capName)
```

Sets cap file name

Parameters:

capName - is the cap file name

execute

```
public void execute()
           throws org.apache.tools.ant.BuildException
```

Builds the commandline of the verifier and starts the verifier.

Throws:

org.apache.tools.ant.BuildException
